WHAT'S HAPPENING...

CorrExpo, Louisville, KY • IFDA Show, Phoenix, AZ

Muller had two tradeshows in October, both of which were industry focused. The CorrExpo targets the corrugated industry and attracts suppliers and end-users from around North America. Over 150 exhibitors and 3,000 attendees participated in the two-day event. On display were Xeros and Clear stretch hood films as well as the Multi-FleXL video.

The IFDA show focuses on foodservice. Muller featured GaleWrap films and the 40" GW-4100. IFDA attracted over 5,000 attendees and 200 exhibitors for the two-day event. Over 50 quality leads were collected; we look forward to forming new relationships through these show efforts! Both shows are important steps toward our more industry-focused, go-to-market strategy.

GOING THE EXTRA MILE... SEPTEMBER GEM

Tom Mutch (Technical Support)

Tom routinely helps the service and equipment team at a moment's notice bringing a wealth of application and industry knowledge to the job.

Tom's support was very apparent when he recently set aside an important customer visit in the States to fly to Mexico and assist on a critical installation at Mondelez. The service team was booked and our techs needed assistance to expedite the install. With the customer watching, Tom helped Muller over-deliver on our commitment and make a positive impression. Tom exudes the Muller team approach!

Thank you, Tom, for your dedication!

MULLER MEET & GREET

KEN CRAWFORD

Where do you live?
Coral Springs, FL, is home.

What is your role with Muller?
I am a Technical Service Engineer.

How long have you been with Muller?
I have been with Muller for 20 years and in stretch wrapping for over 38 years.

What do you enjoy most about Muller?
I like working on the machines and meeting all of the different customer personalities.

I'm a little bit scared of...
I do not like snakes!

Tell us something interesting about you...
I have a pet monkey. I also enjoy going to the beach, scuba diving, and hanging out with my family.

What is your dream travel destination?
I would like to visit every National Park.

Who is your nomination for next month's edition?
Deborah Conklin

PRODUCT SHOWCASE

Lachenmeier— **Multi FleXL**

The latest addition to the Lachenmeier equipment line-up is the Multi FleXL stretch hooding system. Allowing customer throughput rates up to 150 loads/hour, the Multi FleXL is one of the most adaptive and versatile stretch hooding machines in the marketplace. Typically using thicker film than used in stretch wrapping, the no-seam hood concept, coupled with the Multi FleXL, makes it a clear and effective load containment solution.

What is the purpose of the Multi FleXL?

The Multi FleXL is engineered to secure loads larger than average load sizes. The machine is able to hood customer loads as large as approximately 10' x 5' x 10' (length, width, height). The minimum is as low as 1.5' x 1.5' (length, width), allowing for incredible versatility in terms of load dimension. Unique pallet shapes commonly found in corrugated and insulation manufacturing were drivers in the creation of the Multi FleXL.

Who does the Multi FleXL best serve?

Customers with unique load dimensions requiring the five-sided protection offered by stretch hood benefit greatly in using Multi FleXL. By nature, the stretch hood covers the top and all four sides with only one layer of film. This type of security and protection is a must have for a range of industries, including corrugated manufacturing, gypsum board makers, and insulation producers.

Why choose the Multi FleXL stretch hooder?

Aside from the strong containment and protection features inherent in hood technology, the Multi FleXL brings with it the extensive research and development expertise used in earlier models, such as the Power Flex T1 and Multi FleX1. The Multi FleXL has the same patented (EP 1 184 281) film unwinding process for stretch application, eliminating the risk of weak film on the corners of wrapped loads. In fact, this system makes corner film areas about 30% thicker than competitive machines, while saving up to 10% in film consumption.

Features & benefits include:

- Larger than market standard range of load sizes accepted
- Patented film unwind feature during stretch
- Same manufacturer that produces the Xeros "10-Sided Protection" film
- Handles throughput rates of up to 150 loads per hour
