Leverage your sales opportunities with the lightest, strongest hand-wrapping film available

Discover how GaleWrap Leverage Oriented Film outperforms all other pre-stretched wraps on the market. Our patented film, made through a unique Inline Orientation Process (IOP), protects the integrity and condition of your pallets all the way to your customer—and impacts savings all the way to your bottom line.

**PUT LEVERAGE TO WORK FOR YOU**

- **Super strong**—with a 60-70 gauge performance equivalent, Leverage rolls are 50% stronger than other pre-stretched films of equal weight
- **Puncture resistant**—unique oriented molecules are cross-directionally formed, providing exceptional puncture protection
- **Incredibly light**—heavy rolls can cause injuries...a Leverage roll is significantly lighter than conventional 70-gauge film rolls
- **No wasted film (or money)!**—our 110% guarantee: you can use the entire roll to the core...a bonus for the environment and your bottom line
- **Easy to use**—hemmed edges ease film separation from the next layer for a no-hassle start every time...no nicked edges
- **Superior holding force**—due to powerful post-wrap contraction
- **No training necessary**—to get started, simply grab a roll and “tug & snug” on the corners...the film will do the rest!

Get better protection for the product on your pallets and greater bottom-line savings for your company...

Save time and money—*without all the waste!*
