

Tail Tucker Device

Our Patented *Tail Tucker* device ropes the film at the end of the cycle and "tucks" the film tail under the last two full webs of stretch film, eliminating "loose tails" commonly encountered in outdoor storage and open truck transportation

IDEAL FOR:

- Outdoor storage and cold temperature conditions
- Loads transported on open bed trailers
- AS/RS where film tails can cause automation issues
- Harsh, dirty environments
- All types of stretch film, including one-sided cling blown films
- Loads that are shipped in close contact with each other
