

# OctoMAX™

## STRETCH WRAP EQUIPMENT UPGRADES

*"Technology for the 21st Century!"*

The OctoMAX system provides simple, useful, actionable information to monitor film usage and equipment performance in order to drive down costs, optimize load containment, increase productivity and reduce unplanned maintenance.

## CONSISTS OF

A new Smart film carriage, enhanced touch screen display, variable wireless film force control, advanced programming and web based reporting capabilities.

### FEATURES

Monitors and records how much film is applied to each load and the related pre-stretch performance.

Monitors and records the amount of film used and the number of film breaks that occur for each roll of film.

Variable film force control allows for different tension settings at various times during the wrap cycle.

Ability to track machine settings and performance remotely as well as locally.

### BENEFITS

Lower film costs and eliminate waste related to over usage.

Tool for quantifiably comparing different film types to ensure lowest overall cost and minimal disruptions to operations.

Allows for optimal load containment for all types of loads while minimizing film breaks, film usage, and product damage.

Ensures wrapping is being done to specifications to eliminate film waste and load damage.

## IDEAL FOR

Any Octopus model. Requires that existing PLC has an available Ethernet port, otherwise one will need to be added.

Customers looking to make data driven decisions to improve operations.

Customers who value having an insurance policy to prevent film waste and load damage.
