

SideKick™

STRETCH WRAP EQUIPMENT UPGRADES *"Technology for the 21st Century!"*

A second independent film carriage that will automatically rotate into primary wrapping position upon the film being depleted or breaking in order to reduce labor and improve productivity.

FEATURES	BENEFITS
With SideKick, wrapper can run 2 full rolls of film before requiring attention.	Operator has to attend to the machine half as often, freeing them up to do other tasks.
Upon depletion of the film or a film break, the SideKick automatically advances to the primary position and resumes wrapping in a matter of seconds.	Significantly increases productivity and eliminates one of the biggest sources of downtime -waiting for the operator to respond
Provides a redundant system	Offers an insurance policy against one of the film carriages going down or getting damaged and keeps the machine running
Fits into the existing space of the Octopus and does not increase the footprint of the machine	Benefits achieved without sacrificing valuable floor space
Completely automatic, simple design with minimal moving parts	Easy to use and operate Simple to maintain as it does not require an additional cut, clamp, or heat seal system

CONSISTS OF

A high performance Octo-Thread film carriage with ring positioning and patented auto gripping systems.

IDEAL FOR

All Octopus wrappers, with composite or steel rings, with the exception of the Octopus 202.

Customers with capacity constraints who are looking to improve throughput.

Customer where the operator has additional responsibilities beyond monitoring the stretch wrapper

Customers who don't have room for the Auto Roll Changer (ARC)

load containment solutions
